

## Rates for 2025

This document contains all our rates. We apply the rates set by the Dutch Healthcare Authority. These rates are taken from the document "Tariefbesluit Geestelijke Gezondheidszorg en Forensische Zorg TB/REG-25608-02" (Mental Healthcare and Forensic Care Rate Settlement TB/REG-25608-02).

In the event of a discrepancy between this document and the rates set by the Dutch Healthcare Authority, the latter shall prevail. If the Dutch Healthcare Authority changes the rates for 2025, the rates in this document will lapse.

# Individual rates

Individual rates are influenced by:

1. The profession of the therapist

The more specialized a therapist is, the higher the rate.

Psychologists and creative/running/psychomotor therapists are charged as "other professions."  
Psychiatrists and our sexologist are classified as "Specialist physicians."

2. The length of the consultation

Longer consultations have higher rates.

3. Whether it is a diagnostic or treatment consultation

Diagnostic consultations have higher rates because your therapist may need to create/modify a treatment plan or discuss your progress with colleagues.

4. How many different professional groups are involved in your treatment

If three or more professional groups are involved in your treatment (e.g., a clinical psychologist, a psychiatrist, and a creative therapist), the rates are higher. This is because it takes more time to coordinate more complex treatments.
